

PROTECT YOUR ANIMALS AGAINST WOLF ATTACKS WITH GALLAGHER ELECTRIC-FENCING SOLUTIONS

Against
nuisance
caused by
wolves

Wolves are back after an absence of 150 years. An impressive animal to see, but also one that could be dangerous to your animals! Wolves are part of the canine family, and are predators that are largely active at dusk and at night.

Wolves are carnivores and eat meat. They prefer ungulates, such as moose, red deer, roe deer, and wild boar. Sheep, goats and horses are also part of their prey. Wolves are highly adaptable and able to cope in mountains and in lower lying areas. Wolves are also extremely mobile and capable of moving hundreds of kilometres. They have few barriers - they are good swimmers and good walkers; they can easily

complete 70 km overnight. As a result of this high level of mobility, wolves live in territories that are 200 to 2000 km² in size, depending on the amount of available food and the measures that are applied. Electric fencing is a proven and effective way to keep wolves out. You can keep wolves out with effective Gallagher electric fencing. There have been successful projects, where sheep were protected against wolves with electric fencing. With Gallagher fencing you can protect your herd against the danger of wolves.

GALLAGHER'S ADVICE FOR KEEPING WOLVES OUT

Many people choose traditional fencing with wire mesh or wood and think that will keep wolves out. Unfortunately, this is rarely the case. Wolves will go to extremes when they are hungry, and they will do anything to get their tasty morsel. In those situations, climbing and above all digging are completely obvious solutions to wolves. If you really want efficient fencing that keeps wolves out, there is only one solution - electric fencing. After the first contact with this fencing, the wolves will stay away from it. A wolf will not receive a shock from the same fencing twice. You have created a psychological barrier between your animals and the wolves.

Electric fencing:

- ✓ Can be easily fitted by you in most cases;
- ✓ Is extremely effective in keeping wolves out;
- ✓ Is 50% cheaper than traditional fencing. .

Wolf fencing will have to be at least 1.20 m tall and it is important that you use 5 - 7 horizontal wires. The bottom wire must be no more than 20 cm above ground to prevent wolves from having the chance to crawl under the fence. Putting tape rather than cord at the top of the fencing, where possible, deters wolves even more and also prevents them from jumping over the electric fencing. If you would like to be completely sure?

Gallagher recommends double fencing, as this creates an additional barrier. Suitable for isolated areas.

We have various solutions for keeping wolves out and for protecting your cattle and sheep against wolves. These are solutions for semi-permanent and temporary situations. Read further for more information about our solutions for both situations.

ALL THE INFORMATION ABOUT PORTABLE FENCING TO KEEP OUT WOLVES

If you want to protect your animals or land against wolves for a limited period of time, portable fencing is the ideal solution. Portable fencing is easy to erect and take down and is just as efficient as a permanent solution.

GALLAGHER'S ADVICE

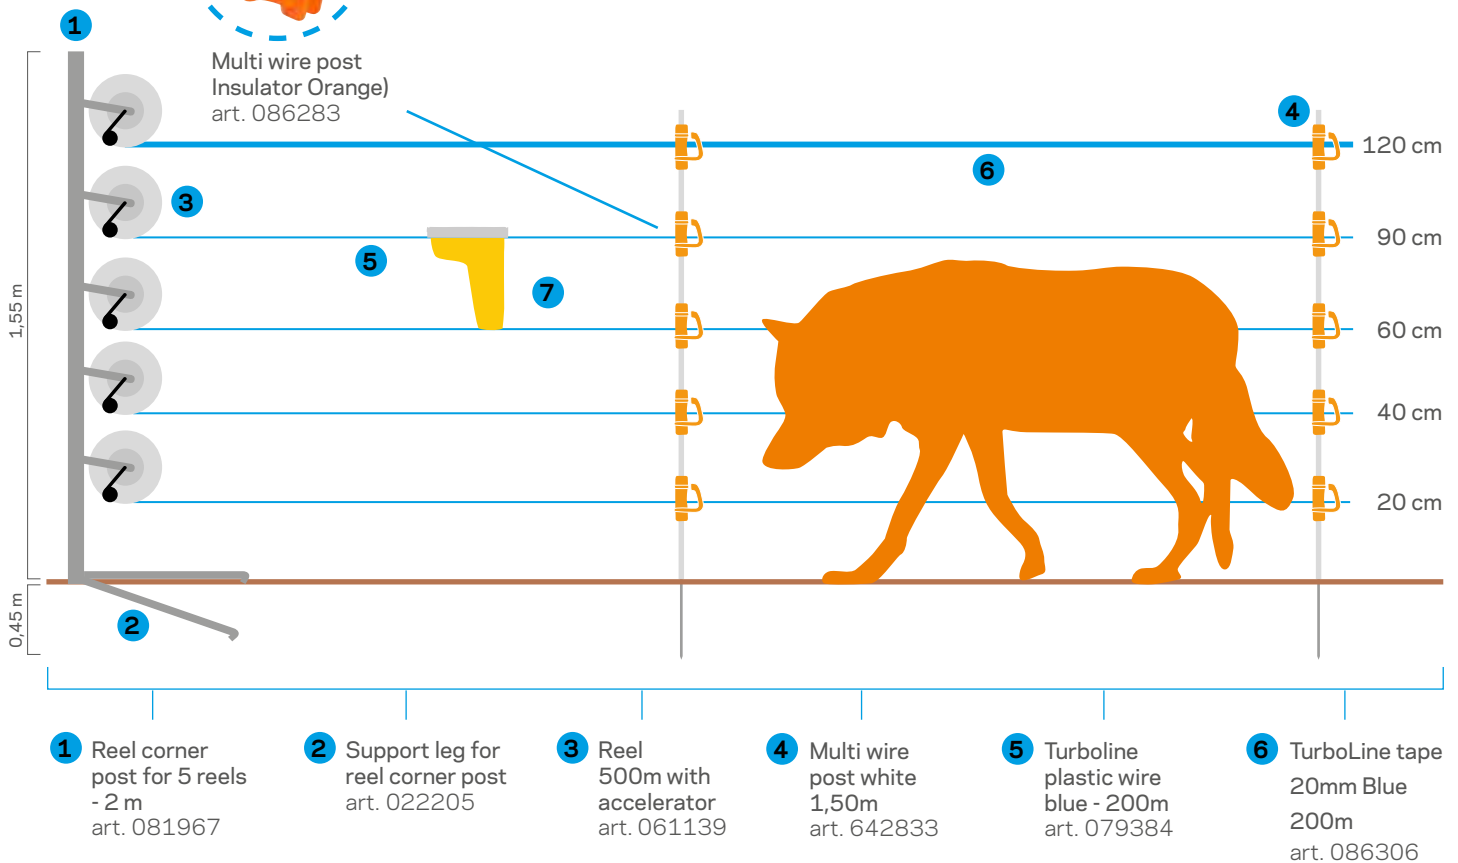

The fencing

Safe portable fencing for keeping out wolves consists of fencing with 5 wires. Gallagher has a unique solution that consists of blue plastic posts, blue wire and a reel system. We recommend signal tape (no current) as top wire or 12.5 mm blue electric tape for even more security.

The choice of energizer depends on various factors, such as the type of energizer (mains, battery or solar), the distance of the fencing and the type and number of conductors. We recommend the Gallagher MB300 Multi Power energizer. This energizer is suitable for fencing of maximum 25 km.

Multi wire post
Insulator (Orange)

Foxlights and wolves

By adding a Foxlights to the fencing, the wolf is scared in the dark by light beams that are emitted in a random pattern. The Foxlights creates the impression that humans are in the vicinity, and wolves will cease exploring the area.

CHOICE OF ENERGIZER

We recommend supplementing the portable fencing with the Gallagher S200 energizer. It is extremely easy to use and still safe to use even after one week without direct daylight.

For more information, please visit www.gallagher.eu/solar

The digital volt meter is an indispensable inspection instrument to measure the voltage on the fencing. The volt meter is also suitable for checking the operation of the earthing and the energizer.

Perform the Gallagher Check for a complete check of your fencing.

See the Gallagher Check at www.gallagher.eu/check.

12.5 mm TurboLine Tape. With reinforced edges and 40 times more conductive than standard polytape. Ideal for portable electric fences

WOLF NETTING AS AN ALTERNATIVE TO KEEPING WOLVES OUT TEMPORARILY

The alternative to erecting temporary fencing is electric netting. Fencing with wolf netting is easy to set up and take down and extremely suitable for herds of sheep that are moved regularly to different pastures.

The fencing

Wolf netting is a complete all-in-one solution for wolf fencing. The netting is 50 metres long and 1.20 m high. In total there are 14 posts with a single pin to ensure it stays strong. The bottom wire is reinforced, which extends its lifespan. This special wolf netting is a plus-minus system,

meaning that the conductors have alternating plus and minus wires. If a wolf comes into contact with 2 wires at the same time, the animal receives a strong shock and that is how the system keeps wolves out.

CHOICE OF ENERGIZER

Complete your wolf netting with a MBS800 energizer.

The MBS800 is the most powerful 3-in-1 multi-power energizer.

This energizer can be used with 230V, a 12V battery or a solar panel.

The Gallagher Premium turbo AGM batteries

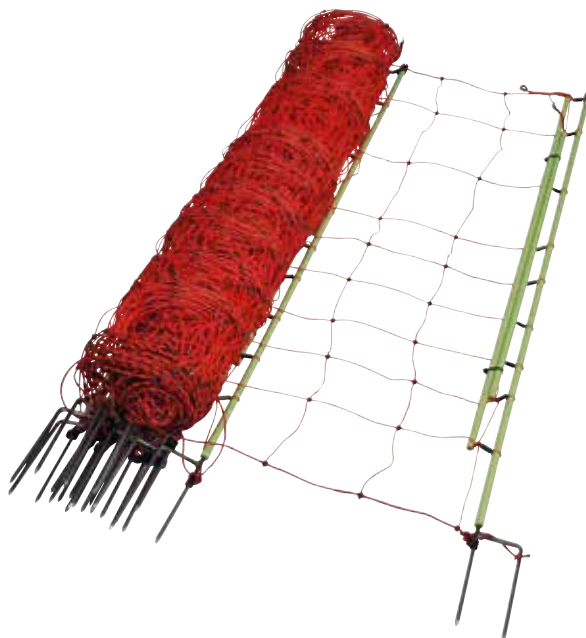

have an extremely low self-discharge, ensuring they last longer than traditional batteries. The battery is delivered filled and charged and can be used immediately.

The battery can be charged by using a 12 Volt battery charger. Can also be used with solar panels.

- 14 posts with a double pin to ensure it's fixed solidly in the ground;
- Extra reinforced bottom wire to prevent biting through;
- Produced with plus-minus wire; this guarantees full voltage on the netting, even with surfaces that are difficult to earth.

WOLF UPGRADE KIT FOR 90 CM SHEEP NET

- Makes a 90cm sheep net fence wolf-resistant
- 8 posts, 120 cm high (excl. pin)
- Replaces half of sheep net posts
- Apply blue tape yourself (not included)

ALL THE INFORMATION ABOUT STURDY PERMANENT FENCING FOR KEEPING OUT WOLVES

Do you need a solid long-term solution but have your animals on property that you do not own? In that case, Gallagher recommends a High Tensile fence in combination with the Insulated Line Post.

GALLAGHER'S ADVICE

The fencing

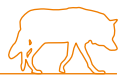

For semi-permanent wolf fencing, we recommend you use the 1.90m Gallagher Line Post together with at least 6 wires. The benefit of the Line Post is that you can fit the post yourself without any difficulties. The post is extremely durable and flexible in design and provides the safety you are looking for. With the matching Line Post clips you can attach the High Tensile wire easily to the Line Post at the right height. For High Tensile you use the Line Post clips that are specifically for cord and wire (art. 744346). The post has been designed to be reused, for when you need to change pasture.

PLEASE NOTE THAT THIS HIGH TENSILE FENCING IS NOT SUITABLE FOR HORSES.

FOR THE BEST PERMANENT SOLUTION FOR YOUR HORSES,

For semi-permanent fencing, we recommend the Gallagher S400 energizer. The S400 is maintenance-free and is still safe for use even after one week without direct daylight.

For more information, please visit www.gallagher.eu/solar

HIGH TENSILE (HT) ADVICE

We recommend you build your fencing, using Aluminised HT wire with a minimum thickness of 2.5 mm.

art. 039999

TIP!

Use blue electric tape of 20 mm as the top wire for your fencing. With its larger size, the tape ensures that wolves are discouraged from jumping over the fence.

art. 086306

Wire clip for a simple attachment of conductors of up to 8 mm.

Fully insulated, quick and easy to put up.

Unique fencing post with durable design.
